

DART International

Data Analysis Reporting Tool

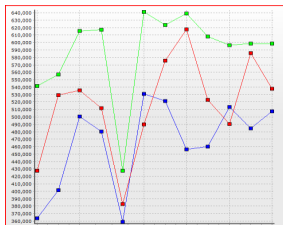

- ⇒ Easy to use Cross-Tab reports so any level of user can create their own complex reports
 - ⇒ Show trends graphically in a way that figures alone sometimes cannot identify
 - ⇒ Combine with other data for single point of access Business Intelligence
 - ⇒ Create Graphs, Charts and Tables from your own application data
 - ⇒ Save or export data into other commonly used data formats

Key Features:

- ◆ Display your application data as a chart or table that can be interrogated, sub-analysed or distributed via other applications.
- ◆ Save the resulting charts or chart formats in DART format or many others including Microsoft Excel or Word (thus also PDF & Email), XML or HTML.
- ◆ Drill down on the graph (e.g. pie chart "slice" or bar chart "bar") to create another chart based upon the element selected, or to see the data in a spreadsheet style data grid.

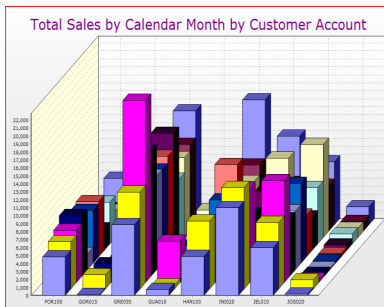

- ◆ Use the powerful multi-level data filters, including ranges, specific data and percentages of the data set (e.g. Top 10 only or bottom 25%).

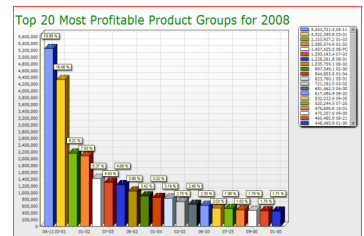

- ◆ Up to five levels of user authority security right down to field level.
- ◆ Show Average, Max, Min, Ranking or Count, as well as Sum.
- ◆ Data grids can be sorted and moved to produce the exact report you require.

- ◆ All reports/charts can be saved for later use with the data being refreshed when next used, or the data being saved along with the report/chart format.
- ◆ Customisable chart display with a legend, 3D display, data labels (value / percentage), grouping, exploded pie slice, titles / sub titles.

- ◆ Share your charts with other users or restrict them to privileged users only.
- ◆ Create Cross-Tabulation reports with more than one variable with a simple to use method that can be understood by any level of user.
- ◆ Amalgamate small values to clarify data, e.g. Group all of the values under 10% into a single bar/pie slice.

Requires Microsoft SQL Server 2005/8 and Microsoft SQL Express.
Not to be sold or used in Great Britain or Ireland.
